April 30, 2007 – FOR IMMEDIATE RELEASE

Amazing Audio from Invisible Speaker

Stealth Acoustics Introduces Model A3: 3-Way, High-Performance Invisible Loudspeaker for Critical Applications

Mount Vernon, WA – Stealth Acoustics announced the immediate availability of its new model A3 high-performance, 3-way invisible speaker for critical board room, conference room, home theater and light commercial applications.

Building upon Stealth Acoustics' successful F-Series of invisible speakers, the A3 is a 3-way, full-range speaker utilizing a rigid frame that fits into a standard 3.5" deep stud wall and attaches directly to standard structural framing without the need for special mounting brackets. The paintable, active, diaphragm radiating surface is a structurally modified three layer composite consisting of two layers of graphics grade paper with a modified foam core, suitable for receiving most standard wall or ceiling finishes including latex paint, light texture or wallpaper.

"The A3 is a true 3-way speaker system" said Steve Olszewski, vice president of Stealth Acoustics. "The fact that it becomes a completely invisible part of the finished wall or ceiling adds aesthetic benefit, but listen to the speaker – there's very little compromise for being invisible compared to other visible speakers in its price range".

The A3's solid midrange "punch" is created by attaching dual mid-frequency drivers to special fiber composite material and arraying them in a manner Stealth brands as "Dual Midrange Drive™". This technology, coupled with the A3's dedicated high-frequency driver and 8" cone woofer, create an invisible speaker solution that extends from as low as 45Hz to 20kHz. Accessory, constant voltage transformers are available.

The Stealth model A3 is available through Stealth's network of system integrators and value added resellers. Manufacturers suggested MAP is \$1,500.00. Stealth Acoustics will be showcasing the A3 in the "Immersive Audio Pavilion", Booth #17045, Hall "E" at Infocomm in Anaheim.
