August 31, 2006 – FOR IMMEDIATE RELEASE

Amazing Audio from Invisible Speaker

Stealth Acoustics Model F6: Full range, High-Performance Invisible Loudspeaker.

Mount Vernon, WA – Stealth Acoustics announced today the immediate availability of its model F6 high-performance, full range invisible speaker. The F6 was the first of the F-series full range speakers introduced by Stealth Acoustics, and is applicable for both in-wall and in-ceiling installations.

Similar to the other models in the Stealth Acoustic line, the F6 utilizes a rigid frame, which attaches directly to standard structural framing without the need for special mounting brackets. The paintable active diaphragm radiating surface is a structurally modified three layer composite consisting of two layers of graphics grade paper with a modified foam core, suitable for receiving most standard wall or ceiling finishes including latex paint, light texture or wallpaper.

The Stealth F6 incorporates an acoustically coupled high quality, high-power 6” cone woofer and a direct coupled 25mm neo-magnet high-frequency motor. Advanced internal carbon fiber materials allow for smooth frequency extension to 20 kHz. When the F6 is installed in standard insulated 2x4 framing and allowed to function in a full 8’ stud bay, frequency response below 50 Hz can be achieved. The F6 contains two independent protection circuits (high-frequency and low-frequency sections) that automatically reset upon reduction of excessive amplifier power.

The Stealth model F6 is available through Stealth Acoustics network of custom electronics installers and value added resellers. Manufacturers suggested MAP is \$660.00 per pair. Stealth Acoustics will be demonstrating the F6 at CEDIA EXPO in Denver, Booth #511.
