August 31, 2006 – FOR IMMEDIATE RELEASE

Amazing Audio from Invisible Speaker

Stealth Acoustics Model F8: Full Range, High-Performance Invisible Loudspeaker.

Mount Vernon, WA –Stealth Acoustics announced today the immediate availability of its model F8 high-performance, full range invisible speaker. The fore runner of the F-series full range speakers system, the F8 is applicable for both in-wall and in-ceiling installations. Ideal for both critical listening situations as well as secondary applications, the F8 is the most versatile speaker of the F-series. This year, the F8 was the recipient of the 2006 Mark of Excellence award in the speaker category, at EHX in Orlando.

Similar to the other models in the Stealth Acoustic line, the F8 utilizes a rigid frame, which attaches directly to standard structural framing without the need for special mounting brackets. The paintable active diaphragm face is a structurally modified three layer composite consisting of two layers of graphics grade paper with a foam core. Panel is suited to receive most standard wall or ceiling finishes including latex paint, light texture or wallpaper. Installation instructions are printed on a separate face plate attached to the speaker panel which is removed before finishing. There is no need for special vellums or other nonstandard wallboard finishing materials.

The Stealth F8 incorporates an acoustically coupled high quality, high-power 8” cone woofer and a direct coupled 25mm neo-magnet high-frequency motor. Advanced internal carbon fiber materials allow for smooth frequency extension to 20 kHz. The F8 contains two independent protection circuits (high-frequency and low-frequency sections) that automatically reset upon reduction of excessive amplifier power.

Stealth Acoustics’ invisibility allows for powerful advantages over traditional loudspeakers as they can be placed wherever they sound best, free of visual concerns that may conflict with architectural features. Manufacturers suggested MAP is \$730.00 per pair. Stealth Acoustics will be giving an audio demonstration the F8 at CEDIA EXPO in Denver, Booth #511.
