The End of Esthetic Pollution

PS6 Place Saver for FX6
PS8 Place Saver for FX8
PS30 Place Saver for AX3
and B1630

For New Construction

Description

The Stealth Acoustics Place Savers are for temporary use on new construction. The greatest exposure to damage occurs during the time the Stealth speaker panels are first mounted to the structural framing and when the taping begins. Particularly during the time when the drywall board is hung. The Place Savers keep this exposure to a minimum by reducing the raw speaker panels exposure to the construction site.

The Place Savers are built from 1/2" MDF and are sized slightly larger than the speaker panel it is reserving space for. This insures that no matter how tight the drywall is hung to the Place Saver, the speaker panel will easily drop into place when the Place Saver is removed. The Place Savers have 1/8"d x 7/8"w grooves on the back side that match the mounting flanges on the Stealth speaker panels. This insures that if the Place Saver is centered properly on the structural framing the speaker panel will be also.

The Place Savers should be installed at the pre-wire stage and replaced with the speaker panel just before drywall finishing begins. The Place Savers have labels on the front with space to write in the Stealth Dealers name and phone number. They are packaged 6 per carton and come with mounting screws. They are also reusable if your installers remember to bring them back from the job site.
