**We're Putting a Whole New Face on Invisible Speakers™**

LINEA **R**ESPONSE  
INVISIBLE SPEAKERS

**Stealth Acoustics** is releasing greatly improved, new model versions of its invisible speakers to a world-wide group of installation firms and distributors at this year's ISE exposition in Amsterdam RAI. Building upon proven and award-winning custom carbon-fiber motor and cone woofer technologies, Stealth Acoustics has created a new invisible speaker line that enhances fidelity, high-frequency smoothness and bass performance over previous offerings, while streamlining installation practices. The new speakers are direct replacements of the award-winning FX and AX lines and maintain the same basic model alignments of the previous models, only with dramatically enhanced sonic performance.

The LinearResponse™ (LR) Series of invisible in-wall or in-ceiling speakers from Stealth incorporate an all-new face-panel material which provides a flatter front surface area eliminating the need for plaster or fill materials to be placed on the face-panel prior to final finishing with normal paint, wallpaper or other previously supported finishes. The new versions also greatly improve the audio response characteristics of Stealth Acoustics' invisible speakers, by providing a warmer-sounding high frequency response and more bass output.

“This is a huge game changer for Stealth Acoustics and for the invisible speaker market in general” states Steve Olszewski, vice president of Stealth. “We already had the only award winning line of invisible speakers, and our new LinearResponse™ series sounds dramatically better than anything we have previously produced. Installers are looking deeply at their product offerings for ‘Silver Bullets’ to define unique abilities and to create strong profit centers; Stealth Acoustics speakers have that great mix of high-margins, market cache’ and now, invisible speakers that exceed the capabilities of expensive visible speakers – the new LR series are going to legitimize the space to an unprecedented level.”

In addition, Stealth Acoustics is releasing its all-new model 8400 8-channel amplifier with unique DSP-based optimization for Stealth speakers. Intended for whole-house, zone, or home theater audio applications, this 80watt per channel amplifier offers adjacent channel bridging, IR control, flexible input routing and efficient, lightweight operation.

Attendees at ISE in Amsterdam February 1-3, 2011 can audition all of Stealth’s products at stand 50105, or visit [www.stealthacoustics.com](http://www.stealthacoustics.com) for more information.

Stealth Acoustic products are distributed world-wide by our directly franchised value added resellers, custom installers and distributors. Contact [Stealth Acoustics](http://www.stealthacoustics.com) with inquiries or [Click here](#) for additional information on Stealth Acoustics.
