Stealth Acoustics to demonstrate High-Impact Invisible Sound with unique “Screen in the Sky” exhibit at ISE Amsterdam, Stand 5O105

View all Stealth Acoustics products at stand 5O105 at the 2011 ISE trade show.

Mount Vernon, WA - Stealth Acoustics' "Screen in the Sky" exhibit at stand 5O105 will once again be one of the more unique audio demonstrations seen at the ISE Exposition in Amsterdam February 1-3, 2011. This 10' wide, 16:9 projection screen standing 10' in the air offers attendees the ability to experience professional sound radiating directly from the projection screen, using a ***quad-amplified implementation of Stealth Acoustics' all-new LR4 invisible speaker technology***. With High Definition 5.1 content and a Stealth invisible speaker surround sound field, you hear crystal-clear, theater-grade sound coming directly from the areas your eyes tell you the sound is coming from without any visible speakers to distract from the pure audio/visual experience. And, the sound impact of the exhibit is awe-inspiring, as in the screen header Stealth has also installed its award winning B-series invisible sub-woofers.

“No one has ever done this type of exhibit before, except Stealth Acoustics.” says Steve Olszewski, Stealth’s vice president. “We debuted this multi-channel screen approach in the US earlier this year and received rave responses. The screen exhibit is extremely cool to experience and proves that Stealth invisible speakers are not just aesthetic tricks, but real, high-end loudspeakers that exceed the capabilities of visible speakers while offering the creative outcomes that only invisibility can produce.

We’ve taken invisible speakers to an unprecedented level by demonstrating the professional audio results of quad amplification in a multi-channel invisible theater system. Quad amplification speaker powering is typically only seen in high-end touring and fixed install venues, but we believe world-class invisible sound should be available to anyone who wants it, including regular people with home theaters or dedicated listening spaces. Once ISE attendees see and hear this exhibit, they will realize that the game has completely changed in the invisible speaker market – we’re going big to prove that our invisible speakers offer better results than comparably priced visible speakers.”

Nick Gavalas of The New York Marketing Team couldn’t agree more: “This exhibit is just unbelievable! The dialog coming right from the mouths of the actors on the screen is just like in a movie theater; clean, articulate and well-imaged across the screen panorama, and when the music or explosions hit, look out, because the totally invisible subwoofers bring the full-range of audio right in your face. Stealth’s new LineaResponse™ family of speakers sound phenomenal!”

Designed to fit invisibly in walls or ceilings, Stealth Acoustics invisible speakers are built from typical yet robust components, with a paintable flat-front construct and a 83mm depth, allowing them to fit in new or remodel constructions. Stealth speakers are available in various models to fit a wide range of applications and price points.

Attendees at ISE in Amsterdam February 1-3, 2011 can audition all of Stealth’s products at stand 50105, or visit www.stealthacoustics.com for more information.

Stealth Acoustic products are distributed world-wide by our directly franchised value added resellers, custom installers and distributors. Contact [Stealth Acoustics](http://www.stealthacoustics.com) or [Click here](#) for additional information on Stealth Acoustics.
