Stealth Acoustics Demos New Smaller StingRay-6 Environmental Speaker at CEDIA Expo

New Stealth Acoustics StingRay Hermetically Sealed Speaker

September 13, 2013 – For Immediate Release

Stealth Acoustics announced today that they will be demonstrating the latest addition to their StingRay family of outdoor speakers at CEDIA Expo in Booth 3725.

Dubbed the StingRay 6 for the 6” cone woofer inside the device, the newest StingRay is the most diminutive member of the StingRay family of totally-sealed outdoor speakers which includes the StingRay-8 full range 8” device and the new StingRay-430 environmental subwoofer.

“StingRay six is the latest iteration of our fully waterproof speaker line and fits a niche for a great sounding, extremely durable outdoor speaker in a smaller format.” said Paul Hagman, president of Stealth Acoustics. “At only 15” wide and less than 4” in depth StingRay six still provides warm natural bass sounds along with our widely appreciated high frequency sound and broad coverage pattern – I think this is our best StingRay device yet and if you couple it with our new outdoor 430 subwoofer, it’s even better”.

Utilizing Stealth proprietary FidelityGlass™ solid-front radiating surface StingRay sports an unprecedented environmental protection rating of IP-68 as measured to IEC standards, which ensure the StingRay’s internal components are fully isolated from any intrusion of dust or moisture. StingRay is rated to be fully operable underwater for up to 64 hours at 1M depth and can withstand rain, snow, sleet, hail, sun and dust in temperatures ranging from 0 degrees F – 150 degrees F.

Visit Stealth Acoustics and audition StingRay at CEDIA Expo, September 26-28 at the Colorado Convention Center, Denver, USA, or visit www.stealthacoustics.com for more information.
