Stealth Acoustics Brings Invisible Speaker Multi-Media Show to CEDIA Expo

Invisibility Perfected - The LineaResponse G™ Series

September 13, 2013 – For Immediate Release

Stealth Acoustics will be bringing a full 5.1 invisible theatre and multi-media show to CEDIA Expo in Booth 3725.

Consisting of an enjoyable demonstration of an impressive invisible speaker 5.1 surround system featuring Stealth' LRG speakers and subwoofers using various music and video clips, Stealth's theatre show will also feature a multi-media presentation and listening experience to reveal the expanded StingRay family of environmentally durable outdoor speakers.

Stealth intends to prove beyond any doubt that a home theatre built from Stealth totally invisible speakers, or even an outdoor theatre built on Stealth's waterproof variants of their technology can provide customers with an impressive listening experience that rivals comparably priced visible speaker systems.

"Some people really don't have belief that an impressive home theatre can be built with invisible speakers and sound as good as one using visible speakers. This is because other invisible solutions do not have the impact and fidelity of our speakers." said Steve Olszewski, Stealth's vice president and show coordinator. "We want to change that perception. We've taken our best speakers and amplifiers, tuned them to match the room environment using the same EQ, delay and levelling techniques employed in top-end home theatres and exhibits, and then added show control, lighting and custom produced videos, all to make a compelling presentation that informs and entertains attendees. While our speakers sound great without any optimization, they can be tailored to better match a room space using DSP tuning. All of the tuning tools we used are going to be available in our new SA2400 Amplifier which incorporates built-in fully-programmable DSP. We're calling this systems approach 'Invisibility Perfected'."

Visit Stealth Acoustics in Booth #3725 at CEDIA Expo and audition all of Stealth's speakers, September 26-28 at the Colorado Convention Center, Denver, USA, or visit www.stealthacoustics.com for more information.
