Totally Invisible Audio Solutions

STEALTH ACOUSTICS APPOINTS AVAD AS US DISTRIBUTOR

January 27, 2015 1:30PM

BREAKING NEWS - For Immediate Release

Stealth Acoustics announced this morning the appointment of AVAD, North America's premier AV solutions provider, as a US distributor for Stealth Acoustics invisible speakers and professional grade amplifiers.

The move, effective immediately, authorizes AVAD to represent Stealth's LR6Ga full-range compact invisible speaker and the B22Ga compact invisible subwoofer along with Stealth's high-current SA255 and SA2400 amplifiers, through their 21 branches located within the continental US.

AVAD, an Ingram Micro company, maintains a value-added leadership role in providing AV products to a national base of residential and commercial integrators who will now benefit from the addition of Stealth products.

Stealth Acoustics has received many industry accolades for their patented speaker technologies, including the 2014 CEA Tech Home Division Mark of Excellence Award and the 2014 SCN Infocomm Installation Award.

"This is a relationship that makes sense, not just for Stealth and AVAD, but for the many busy integrators who will now get our LR6G and B22G invisible speakers quickly and reliably from AVAD outlets." informed Steve Olszewski vice president at Stealth Acoustics. "We chose AVAD in part because they serve a substantial customer base and recognize the unique value of our technologies, brand and industry relationships".

Hugh Hughes, Director of Vendor Management and Purchasing at AVAD concurs. "We always look for the best partners and products and this relationship adds a respected and award-winning invisible speaker line to our portfolio. Stealth's superior sound quality, coupled to the powerful

aesthetic benefits of not seeing speaker grills or boxes, provides excellent revenue growth potential for our residential and commercial integrator partners.”

“We’re very excited about AVAD dealers having easy access to our LR6G speaker and B22G subwoofer,” continued Olszewski. “Unlike other invisible offerings, we have developed the sound reproduction needed to be successful in a broad array of demanding applications. Custom homes, boardrooms, conference rooms, hotels, hospitals, bars and restaurants are just some examples where our invisible speakers can effectively replace older-style visible solutions, without sacrificing performance.”

Stealth invisible speakers and subwoofers are individually hand-built in the USA and employ a patented hybrid combination of traditional cone woofers and directly coupled high-power tweeters that energize a specialized impenetrable solid fiberglass material Stealth dubs “Fidelity Glass™”. Once mounted to standard wall or ceiling framing the grill-less flat front of the speaker can be finished in paint, wallpaper, graphics or wood veneers to blend in seamlessly and invisibly with the adjoining wall or ceiling. Stealth claims that their technology allows their speakers to perform better than other invisible solutions or even comparably-priced visible speakers.

AVAD indicates that they are rapidly ramping up stock of Stealth products in all 21 US branches with availability to ship to AVAD customers in approximately two weeks.
